

Product Specification Sheet:

Compact DC3

Dementia Care Height Adjustable Bath
with Powered Seat

able
Healthcare

Highlights:

- **Dementia Care** features and lockout with handset control and light indicators
- **Height adjustable** to minimise carer handling strain
- **Integrated powered seat system** for safe transfer (detachable option available)
- **Seat transfer trolley** for easy bathroom to bedroom transfers (with detachable seat option)
- **1600 mm and 1700 mm** options

The **Compact DC3 Bath** is specifically designed for use within a dementia care setting. The unique auto lockout systems ensure that the water cannot be accidentally turned on and that the bath features are immobilised, with an indicator light on the handset when the lockout is activated. The bath has a built in auto-fill system to enable the carer to set the bathwater running unattended, without the risk of overflow.

The unique shape of the Compact bath range and height adjustable design give maximum comfort to the bather and minimal strain and ease of use for the carer. With a proprietary bearing system, recyclable durable panels, and high grade 304 stainless steel parts, the Compact range has been **designed for longevity** and built to the highest standard.

The **integrated powered seat**, with its clip-and-lock lap strap, nursing arms and obstacle sensor, enables the safe and comfortable transfer of bathers. On the Compact DC3, there is an option for the seat to be of a contrasting colour to help bathers with perception issues to sit down more assuredly. The seat is shaped to give optimal carer access, especially with the commode seat option. Each seat is also available in a detachable option, where the seat can be completely removed, and a **headrest fitted** to enable comfortable bathing when the seat is not in use. A transfer trolley is then available for safe and smooth transfers on the seat.

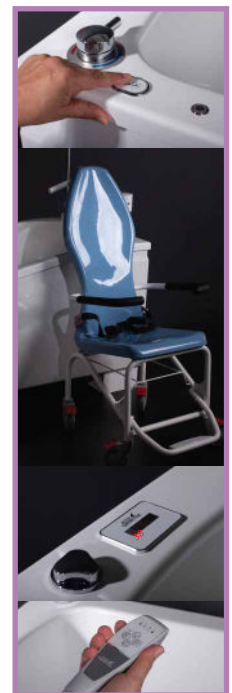

The gantry system is Kiwa KUKReg4 approved and provides backflow protection to fluid category 5 level and TMV3 temperature control. The bath water controls are fitted with a separate TMV3 temperature control with a digital display showing the temperature of the water leaving the spout.

Standard Features:

- Maximum Working Load (MWL) 150 kg/24 st
- Powered seat with lap strap, nursing arms and obstacle sensor
- Bath filler system with built in TMV3 temperature regulation and ¼ turn controls
